Subject: Northern Access Fracking Pipeline

I OPPOSE the Northern Access fracked-gas pipeline. Please extend the public comment period for an additional 60 days, in order to allow for crucial conversation on the project.

Fracking adds to Climate Change. Climate Change is apparent across our nation as to the harm inflicted on local communities. An obsolete fossil fuel industry is expanding their deadly infrastructure risking human and natural health and life.

Fracking needs pipelines. Fracking causes earthquakes, as indicated in Pennsylvania's unprecedented earthquakes near fracking pads. Earthquakes can harm pipeline infrastructure, leading to leaks and explosions, further putting at risk human and natural life.

Industry tells us accidents will happen. Continuing practices that invite accidents seems to be criminally negligent behavior, which is the reason legislators, in their obsession to control local community members, has made illegal the act of drunk driving. Commercial interests must be held to the same standard; and indeed so

should political bureaucrats and politicians who make the regulations, or fail to as the case may be, and the politicians who pass laws that seem unfair, produce inequality, and can be called unethical due to the money politicians receive to inflict this harm on local communities.

Please do not permit the Northern Access Fracking Pipeline due to these very obvious reasons.

And as to the red herring that fracking provides jobs, this is an insufferable fake statement. Development of a sustainable and renewable energy grid will produce far more jobs, at a living wage, in local communities, and far into the future. No man camps....no job bubbles.....and the energy grid created would be less exposed to outages due to weather, terrorism, and accidents.
